Tree Planting Project Planning Document

Location #1

What location did you pick? Which direction from the school? (North, south, east, west; Lattitude and longitude). How many meters away from the front or back of the school? Be specific.	
How many trees are you proposing to plant in this area?	
How would adding trees to this area make it better?	
What tree species would work best to make this area better? Explain why. (Native or exotic, size, root system, etc.)	
How do your choices take into account existing trees and other features around the school? (Are there other trees in that location? How close are you to the school, sidewalks, parking lot?)	

How will your tree planting areas impact or change the existing built and natural environment?	
How will you show on your map where the new trees will be planted?	
Take a screenshot of this location with your proposed new trees.	

Location #2

What location did you pick? Which direction from the school? (North, south, east, west; Lattitude and longitude). How many meters away from the front or back of the school? Be specific.	
How many trees are you proposing to plant in this area?	
How would adding trees to this area make it better?	

What tree species would work best to make this area better? Explain why. (Native or exotic, size, root system, etc.)	
How do your choices take into account existing trees and other features around the school? (Are there other trees in that location? How close are you to the school, sidewalks, parking lot?)	
How will your tree planting areas impact or change the existing built and natural environment?	
How will you show on your map where the new trees will be planted?	
Take a screenshot of this location with your proposed new trees.	

Locations & species NOT selected

What locations did you consider but not select? Why did you not select these locations?	
What tree species did you consider but not select? Why did you not use these species?
