

## Investigating Natural Gas Production and Consumption with Web GIS

Natural gas is made up of remains of dead plants and animals that lived millions of years ago. In this activity, you will use Web GIS to investigate patterns of natural gas production and consumption. You will

1. Examine countries with natural gas reserves.
2. Compare natural gas production and consumption of countries in 1980 and 2008.

Read **all** instructions and answer **each** question on your investigation sheet.

### Step 1: Download Data

Open your Web browser. Go to [www.ei.lehigh.edu/learners/energy/](http://www.ei.lehigh.edu/learners/energy/)

Under **Natural Gas**, select “Investigating Natural Gas Production and Consumption with Web GIS.”

### Step 2: Basic Features of Web GIS

<p>a. Your screen should open to a global view as shown in the picture to the right.</p> <p>b. To navigate in Web GIS you can use the navigational tools (# 1) or the hand (# 2). You can move around the map by selecting different areas or scrolling to them.</p> <p>c. You can zoom into an area by using the zoom options (# 3) or by double clicking on a location.</p> <p>d. You can find your exact location on the map using the latitude and longitude tool located in the bottom left corner of the map (# 4).</p>	
<p>e. You can also get back to the main view by using the <b>Bookmark</b> icon in the toolbar at the top of the screen (# 2). In the window that appears, select <b>World View</b>.</p> <p>f. The data for each activity can be activated using the <b>Map Legend Tool</b> (# 1). Click on the Map Legend Tool. The Map Legend window will appear. In the Map Legend window, activate a data layer you wish to display by clicking the checkbox. You can expand or shrink a legend item by clicking on the globe icon  next to each data layer label.</p> <p>g. To observe the legend for a specific data layer, select the globe icon  next to that item in the list (# 3).</p>	

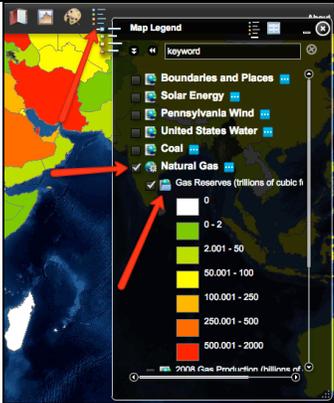

h. You can also activate portions of the data layers by selecting options from the top toolbar menus.

**Step 3: Examine countries with natural gas reserves. (Questions 1)**

Let's investigate which countries have large amounts of natural gas reserves.

a. Activate the Natural Gas Reserves data layer. In the Map Legend window, select **Natural Gas**, as shown to the right. Click on the globe next to Natural Gas. Then click on the globe next to **Gas Reserves** to view the legend for that data layer.

b. Query the Gas Database as shown to the right (# 1). In the window that opens, select to **Sort By: Gas Reserves** and click **Select Sort**.

c. In the Reserve Query window that appears select to Sort By: **Country and Ascending**. When finished, click Submit Query.

d. In the data chart that appears sort the columns based on Reserves (Trillions of Cubic Feet). To sort a column in descending order click the top of this column twice.

Answer **questions 1** on your investigation sheet.

Gas reserves are listed in amounts of trillions of cubic feet. 1 trillion = 1,000,000,000,000.  
1 cubic foot = 28.32 liters

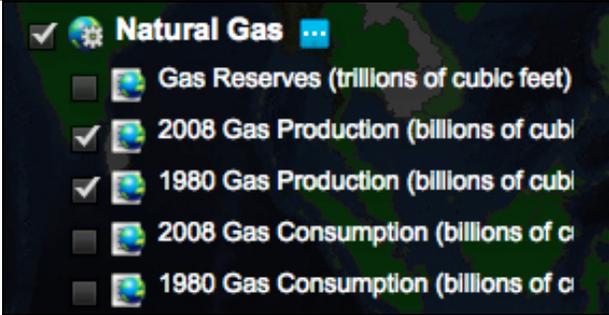

e. Close the **Query Gas Database** window by selecting the “x” in the top right corner.

**Step 4: Analyze natural gas production. (Questions 2 - 4)**

Let's investigate...

- Which countries produced large amounts of natural gas in both 1980 and in 2008?
- Which countries produced more natural gas in 2008 than in 1980?
- Which countries produced less natural gas in 2008 than in 1980?

<p>a. In the <b>Map Legend</b> activate the 2008 Gas Production and the 1980 Gas Production layers. Deactivate the Gas Reserves Layer.</p> <p>b. You should toggle back and forth between the 1980 and 2008 layers to see which countries changed their production.</p>	
<p>c. Open the Query Gas Database using the Natural Gas dropdown tool at the top of the page.</p> <p>d. Choose to <b>Sort By: Gas Production</b>. Click <b>Select Sort</b>.</p> <p>e. In the window that appears, select to sort by: <b>Country</b> and <b>Ascending</b>. When finished click <b>Submit Query</b>.</p>	
<p>f. In the Production Query results, locate the <b>Billions of Cubic Feet, 2008</b> column. If you can not see the entire data set, you can widen the columns by placing the mouse between two columns. Click and drag your mouse to make a column wider or smaller.</p> <p>g. Sort the column in Ascending and Descending order by clicking on the top of the column.</p>	
<p> Answer <b>question 2</b> on your investigation sheet. List the 4 countries that produced the largest amounts of natural gas in the <b>2008 Natural Gas Production Data Charts</b> on your investigation sheet.</p>	
<p>d. Sort the <b>Billions of Cubic Feet, 1980</b> column in descending order. <b>Helpful hint:</b> Click the column twice.</p>	
<p> List the 4 countries that produced largest amounts of natural gas in the <b>1980 Natural Gas Production Data Chart</b> on your investigation sheet.</p>
